

The future of clinical studies

The decentralized approach and the use of new technologies, allow a reduction of visits and a simplified interaction between centers and subjects.

1

The subject is **interested** and **recruited** for the study via the **eConsult**

2

The subject receives an **eConsent** and communicates with the center through the **eConsult**

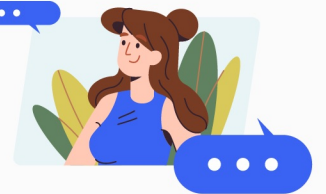

3

The subject **receives** his products and materials at home or **picks them up** at the center

4

Visits that can be carried out remotely are done via the **eConsult** and the data is collected in the **eCRF**

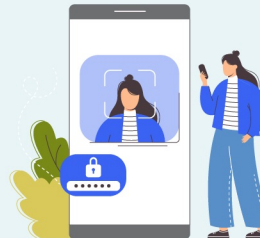

5

The volunteer receives **surveys** via the **ePRO** and can answer them on their phone

6

Photos can be taken by the volunteer during the study via the **ePRO**

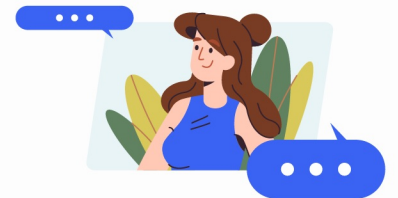

7

The center can track all data **on a single platform**

8

The center can **contact** the subject at any time via the **eConsult**

9

The center checks and **exports** all structured data **in one click**

10

Products and materials are **returned** or **deposited** at the center
